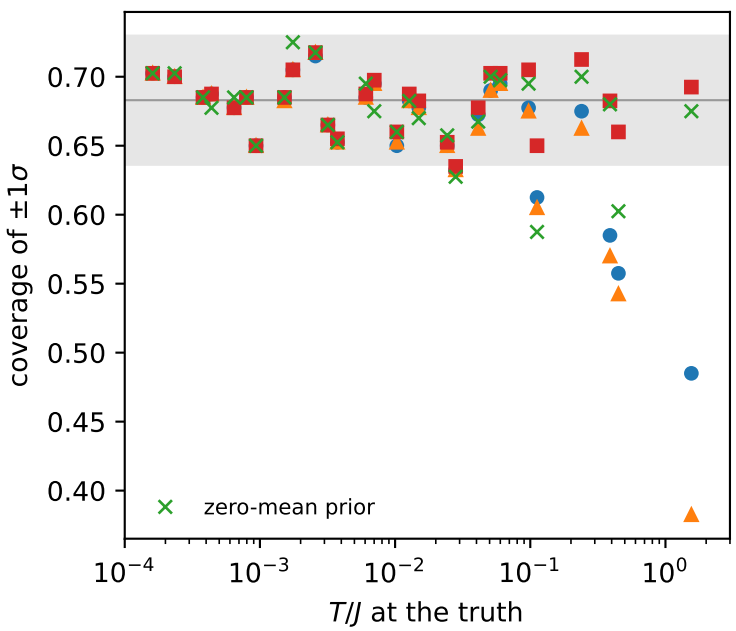
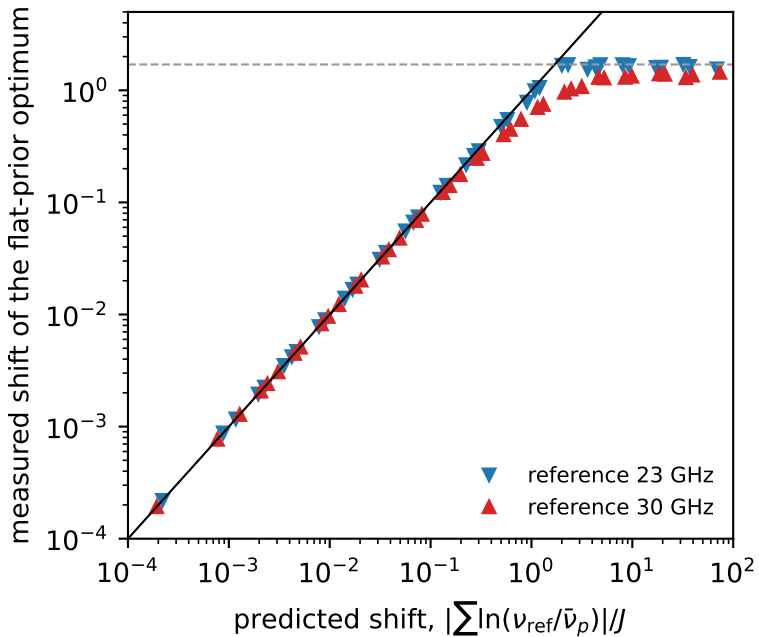
$\sqrt{1+T/J}$
$(1+t)^{3/2}/(1+2t)^{1/2}$
curvature width
plug-in sandwich
debiased sandwich
sd of $(\hat{\beta}-\beta)/\sigma$
T/J at the truth



zero-mean prior
coverage of $\pm 1\sigma$
T/J at the truth



reference 23 GHz
reference 30 GHz
measured shift of the flat-prior optimum
predicted shift, $|\sum_p \ln(\nu_{\mathrm{ref}}/\bar{\nu}_p)|/J$
